Brewery Management Systems

SPA - PDA

A paperless system for the efficient brewery.

Synchronises wirelessly with BMS's Manage Deliveries to give consolidated delivery and collection schedules.

Deliveries

BMS checks the cask status and location of delivery customers then prioritises adjacent collections to give the most efficient delivery and collection schedule before downloading to the PDA. Manual selection is also available.

At the delivery, casks are scanned by the PDA's 1D laser scanner to confirm the order. Customer signature and name are collected and payment is accepted by card, via an App, cash or account. The Invoice can be emailed from the PDA to the customer; perfect for JD Wetherspoons and other customers looking for Proof of Delivery and prompt delivery advice. If required orders are amended at the customer.

Collections

The PDA screen shows the ageing of casks. Casks are scanned to confirm the collection and if any are missing, notes are added which update the cask to 'Limbo status' in BMS.

Synchronisation

Back at the brewery, the day's activities are wirelessly synchronised to BMS, including Limbo casks and payments. A copy of all invoices, and confirmation if the invoice was emailed, is also downloaded. A consolidated payments received note can be printed for bank reconciliation.

PDA Specification

The rugged PDA has an 8hr battery life, is dual SIM for difficult reception areas, has a 5.5" Gorilla© Glass TFT screen and Bluetooth connectivity. Signatures are recorded on the PDA, simply with the end of a finger. Android Apps, navigation, tracking etc. may be added to the PDA. There is a vehicle mount unit with wireless charging and back at the brewery the PDA will charge via a wireless dock or microUSB.

Brewery Management System
- ✓ Cask Track/Management
- ✓ Brew Production
- ✓ Stock
- ✓ Customers/Sales
- ✓ Accounts Duty

SPA - PDA
- ✓ Proof of Delivery
- ✓ Card payment
- ✓ Email Invoices
